

Saved Words Screen — Layout & Responsiveness Audit

Date: June 8, 2026

Scope: `SavedWordsScreen.tsx` and components **directly rendered** by it:

Component	Render path
<code>SavedWordsScreen</code>	Root screen (includes Quiz <code>Modal</code> UI)
<code>SavedWordCard</code>	<code>FlatList</code> <code>renderItem</code>
<code>GlassCard</code>	Stats bento in <code>renderListHeader</code>
<code>SearchBar</code>	<code>renderListHeader</code> → <code>searchSection</code>
<code>EmptyState</code>	<code>FlatList</code> <code>ListEmptyComponent</code>
<code>LoadingSpinner</code>	Loading branch
<code>PronunciationButton</code>	Inside each <code>SavedWordCard</code>
<code>GlassCard</code> (nested)	Inside each <code>SavedWordCard</code>

Design reference: `stitch_verba_intelligence_platform/saved_words_collections/code.html`

Out of scope: Colors, typography tokens, business logic, navigation, unrelated files.

1. Executive Summary

Severity	Count	Primary triggers
High	3	Quiz modal without scroll; stats row flex constraints; scaled subtitle line-height
Medium	5	Large-font stat row cramping; quiz content in landscape; long quiz words; inconsistent stat value scaling; nested scroll coupling
Low	4	<code>EmptyState</code> double padding; pronunciation pulse bleed; fixed stat divider height; intentional tab horizontal scroll

Page-level horizontal scroll: Not observed in code paths for the main vertical `FlatList` — only the **collection tab strip** scrolls horizontally (matches design `overflow-x-auto` at HTML line 258).

Overall: Portrait phone layouts are mostly sound thanks to `minWidth: 0` on `SavedWordCard` title/definition columns. The highest-risk areas are the **Quiz modal** (no `ScrollView`) and the **stats bento row** under narrow width + Large font scale.

2. Issue Register (Prioritized)

Priority 1 — High

SW-L01 — Quiz modal body clips content (no vertical scroll)

Field	Detail
Component	<code>SavedWordsScreen</code> → Quiz Modal → <code>quizBody</code>
Symptoms	Content clipped top/bottom; unreachable options or Next button
Triggers	Landscape orientation; small-height devices (iPhone SE); Large font scale; long definition options (4× multi-line)
Root cause	<code>quizBody</code> uses <code>flex: 1</code> + <code>justifyContent: 'center'</code> with no <code>ScrollView</code> . All quiz content is in a fixed vertical stack. Landscape reduces viewport height dramatically while option cards grow with wrapped text.
Design reference	No dedicated quiz modal in <code>saved_words_collections/code.html</code> (quiz button only at lines 226–229). N/A for screenshot parity.
Recommended fix	Wrap <code>quizBody</code> contents in <code>ScrollView</code> with <code>contentContainerStyle={{ flexGrow: 1, paddingVertical: ... }}</code> . Replace <code>justifyContent: 'center'</code> with top-aligned scroll content; add <code>keyboardShouldPersistTaps="handled"</code> . Keep existing safe-area padding on <code>quizContainer</code> .

SW-L02 — Stats bento text column can overflow narrow stat blocks

Field	Detail
Component	<code>SavedWordsScreen</code> → <code>renderListHeader</code> → <code>statsRow</code> → <code>statBlock</code> (both streak & mastered)
Symptoms	Label/value text overlaps icon or adjacent column; horizontal crowding; text truncated without ellipsis
Triggers	Small devices (≤ 320 pt width); Large font scale on <code>statLabel</code> (uses <code>fontSizeMultiplier</code>); long label strings ("Words Mastered")
Root cause	<code>statBlock</code> has <code>flex: 1</code> and <code>minWidth: 0</code> , but the inner text wrapper <code><View></code> (sibling to <code>statIcon</code>) has no <code>flex: 1</code>, <code>minWidth: 0</code>, or <code>flexShrink: 1</code> . React Native Views default <code>flexShrink: 0</code> , so the text column resists compression in the side-by-side row sharing space with a 56px icon, 1px divider, and second column.
Design reference	<code>saved_words_collections/code.html</code> lines 199–224 — desktop uses <code>md:flex-row</code> with generous gap; mobile stacks stats vertically in responsive layout. Implementation keeps both stats always side-by-side , tighter than design on narrow screens.

Field	Detail
Recommended fix	Add <code>flex: 1, minWidth: 0</code> to the text wrapper <code>View</code> inside each <code>statBlock</code> . Optionally allow <code>statLabel</code> to wrap (<code>flexWrap</code> not needed if Text wraps). Consider <code>flexWrap: 'wrap'</code> on <code>statsRow</code> below a width breakpoint using <code>useWindowDimensions</code> — layout-only row wrap, not visual redesign.

SW-L03 — Subtitle text vertical clipping at Large font scale

Field	Detail
Component	<code>SavedWordsScreen</code> → <code>renderListHeader</code> → subtitle <code>Text</code>
Symptoms	Descenders clipped; lines visually cropped
Triggers	Settings → Font Scale → Large (<code>fontSizeMultiplier</code> 1.25)
Root cause	<code>fontSize</code> scales with <code>fontSizeMultiplier</code> (~15.3px) but <code>styles.subtitle.lineHeight</code> is fixed at 24 . At 1.25× scale, line-height ratio falls below readable minimum (~1.55×).
Design reference	<code>saved_words_collections/code.html</code> line 186 — subtitle uses <code>definition-body</code> with proportional 18px/28px line-height.
Recommended fix	Set <code>lineHeight</code> dynamically: <code>typography.definitionBody.lineHeight * 0.85 * fontSizeMultiplier</code> (or remove fixed <code>lineHeight</code> from StyleSheet and compute inline). No font token changes required.

Priority 2 — Medium

SW-L04 — Stats value/unit do not scale with font preference (row height mismatch)

Field	Detail
Component	<code>SavedWordsScreen</code> → <code>statValue</code> , <code>statUnit</code>
Symptoms	Uneven vertical rhythm in stat blocks; label wraps while value stays small; divider shorter than content
Triggers	Large font scale on labels only
Root cause	<code>statLabel</code> uses <code>fontSizeMultiplier</code> ; <code>statValue</code> is hardcoded <code>fontSize: 28</code> and <code>statUnit</code> <code>fontSize: 13</code> in StyleSheet. <code>statDivider</code> has fixed <code>height: 48</code> .
Design reference	Lines 206–221 — display values scale with design tokens proportionally.

Field	Detail
Recommended fix	Apply <code>fontSizeMultiplier</code> to value/unit sizes inline (layout sizing only, same type family). Set <code>statDivider</code> to <code>alignSelf: 'stretch'</code> with <code>height: undefined</code> or <code>minHeight: 48</code> so it grows with taller stat blocks.

SW-L05 — Quiz question word can overflow horizontally

Field	Detail
Component	<code>SavedWordsScreen</code> → Quiz Modal → <code>questionWord</code>
Symptoms	Long saved words extend past screen edge; horizontal clip
Triggers	Long compound words; Large font scale ($32 * \text{fontSizeMultiplier} \rightarrow 40\text{px}$); landscape with split keyboard (reduced width)
Root cause	No <code>flexShrink</code> , <code>numberOfLines</code> , or horizontal padding constraint on quoted word. <code>textAlign: 'center'</code> alone does not force wrapping for unbroken strings.
Design reference	N/A (quiz UI not in stitch screen).
Recommended fix	Add <code>paddingHorizontal: spacing.gutter</code> on <code>questionWord</code> or parent; add <code>flexWrap</code> via allowing Text to wrap (default) with <code>maxWidth: '100%'</code> on container; optional <code>adjustsFontSizeToFit + numberOfLines={2}</code> for extreme lengths.

SW-L06 — Quiz option definitions expand without scroll boundary

Field	Detail
Component	<code>SavedWordsScreen</code> → Quiz Modal → <code>optionCard</code> / <code>optionText</code>
Symptoms	Lower options and Next button pushed off-screen
Triggers	API-length definition strings in quiz options; multiple saved words with long summaries
Root cause	<code>optionText</code> wraps (good) but parent <code>optionsContainer</code> has no max height; combined with SW-L01 non-scroll body, total content height can exceed viewport. <code>optionText</code> uses fixed <code>fontSize: 16</code> — does not grow with accessibility setting (reduces but does not eliminate issue).
Design reference	N/A
Recommended fix	Primary: SW-L01 <code>ScrollView</code> . Secondary: add <code>flexShrink: 1</code> on <code>optionsContainer</code> ; ensure <code>optionText</code> has <code>flexShrink: 1</code> inside <code>optionCard</code> .

SW-L07 — Collection tabs: nested horizontal scroll inside vertical list header

Field	Detail
Component	<code>SavedWordsScreen</code> → <code>tabsContainer</code> → horizontal <code>FlatList</code>
Symptoms	Horizontal scrolling within tab strip only (intentional); occasional scroll gesture conflict with parent vertical list
Triggers	All widths; more noticeable when swiping diagonally on tab row
Root cause	Horizontal <code>FlatList</code> embedded in <code>ListHeaderComponent</code> of vertical <code>FlatList</code> . Four tabs with <code>paddingHorizontal: 16</code> pills exceed narrow screen width — requires horizontal scroll (by design).
Design reference	<code>saved_words_collections/code.html</code> lines 257–276 — <code>overflow-x-auto</code> tab strip with <code>whitespace-nowrap</code> . Matches design intent.
Recommended fix	Not a page-level horizontal scroll bug. Optional: replace inner <code>FlatList</code> with <code>ScrollView horizontal + flexDirection: 'row'</code> for simpler nesting; add <code>nestedScrollEnabled</code> on Android. Reduce pill <code>paddingHorizontal</code> slightly on narrow screens via <code>useWindowDimensions</code> if tabs feel cramped.

SW-L08 — Saved word card header compression on very narrow + Large font

Field	Detail
Component	<code>SavedWordCard</code> → <code>header</code> → <code>titleCol</code> + <code>actions</code>
Symptoms	Word title squeezes to 1–2 narrow columns; phonetic pushed below badge aggressively
Triggers	≤320pt width + Large font scale on <code>wordName</code>
Root cause	<code>actions</code> is <code>flexShrink: 0</code> (~98px: pronunciation slot 54px + remove 44px). <code>titleCol</code> has <code>minWidth: 0</code> (good) but <code>wordName</code> scales to <code>sectionHeading * 0.65 * 1.25 ≈ 22.75px</code> with heavy weight — competes for ~150px usable width after card padding.
Design reference	Lines 281–297 — card header uses <code>justify-between</code> with similar action cluster; design shows shorter sample words.
Recommended fix	Ensure <code>wordName</code> keeps <code>numberOfLines={2}</code> (already set). Add <code>flex: 1</code> explicitly on <code>titleCol</code> (redundant but safe). Consider stacking <code>actions</code> below title on narrow widths via <code>flexWrap: 'wrap'</code> on <code>header</code> — layout-only responsive wrap.

Priority 3 — Low

SW-L09 — EmptyState double horizontal padding narrows message column

Field	Detail
-------	--------

Field	Detail
Component	<code>EmptyState</code> (as <code>ListEmptyComponent</code>)
Symptoms	Description wraps excessively; excessive whitespace margins
Triggers	Small devices; long <code>searchQuery</code> in description string
Root cause	Parent <code>listContent</code> already applies <code>paddingHorizontal: spacing.gutter (16)</code> . <code>EmptyState</code> adds <code>paddingHorizontal: spacing.containerPadding (24)</code> . Effective horizontal inset $\approx 40\text{px}$ per side. <code>desc</code> also has <code>maxWidth: 260</code> which further constrains on top of insets.
Design reference	Empty state not shown in stitch saved words screen.
Recommended fix	Pass a prop or use zero horizontal padding on <code>EmptyState</code> when used inside padded lists; or remove <code>paddingHorizontal</code> from <code>EmptyState.container</code> and let parent control insets. Widen <code>maxWidth</code> to <code>'100%'</code> with parent padding only.

SW-L10 — Pronunciation pulse ring may bleed outside card bounds

Field	Detail
Component	<code>SavedWordCard</code> → <code>PronunciationButton</code> inside <code>GlassCard</code>
Symptoms	Pulse animation visually overlaps adjacent list items or card border
Triggers	Active audio state; pulse scale 1.15× on 40px button in 54px slot
Root cause	<code>GlassCard</code> uses <code>overflow: 'visible'</code> (intentional, per <code>GlassCard.tsx</code> comment). Pulse ring is <code>position: 'absolute'</code> within slot; slot fits button but glow extends to card edge.
Design reference	Lines 290–292 — <code>animate-pulse</code> on 40px audio button inside card.
Recommended fix	Low priority if no clip reported. Add small <code>marginRight</code> on <code>actions</code> or increase <code>header gap</code> to absorb pulse. Optional <code>overflow: 'hidden'</code> on card header row only (not entire card).

SW-L11 — Saved card footer row lacks flex shrink on date label

Field	Detail
Component	<code>SavedWordCard</code> → <code>footer</code> → <code>dateText</code>
Symptoms	Rare horizontal pressure between date and mastery dots
Triggers	Large font on <code>dateText</code> (currently fixed 12px — low risk unless later scaled)

Field	Detail
Root cause	<code>dateText</code> has no <code>flex: 1 / flexShrink: 1 / numberOfLines={1}</code> ; <code>masteryDots</code> is <code>flexShrink: 0</code> .
Design reference	Lines 305–311 — footer <code>justify-between</code> with short date string.
Recommended fix	Add <code>flex: 1, minWidth: 0, numberOfLines={1}</code> to <code>dateText</code> .

SW-L12 — Loading state message has no width constraint

Field	Detail
Component	<code>LoadingSpinner</code> (loading branch)
Symptoms	Theoretical wrap issue with very long <code>message</code> prop
Triggers	Current message " <code>Loading your collection...</code> " is short — not reproducible today
Root cause	<code>messageText</code> in <code>LoadingSpinner</code> has no <code>maxWidth</code> or horizontal padding
Design reference	N/A
Recommended fix	Add <code>paddingHorizontal: spacing.containerPadding</code> and <code>textAlign: 'center'</code> on message if future messages lengthen. Defer unless message copy changes.

3. Component-Level Pass/Fail Matrix

Component / Region	Small device (320pt)	Large font (1.25x)	Landscape	Horizontal page scroll
Subtitle	⚠ L03	⚠ L03	☑	☑
Stats bento (<code>GlassCard</code>)	⚠ L02, L04	⚠ L02, L04	☑	☑
Quiz button	☑	☑	☑	☑
<code>SearchBar</code>	☑	☑	☑	☑
Collection tabs	☑ (H-scroll intended)	☑	☑	☑ (strip only)
<code>SavedWordCard</code> list	⚠ L08	⚠ L08	☑	☑
<code>EmptyState</code>	⚠ L09	⚠ L09	☑	☑

Component / Region	Small device (320pt)	Large font (1.25x)	Landscape	Horizontal page scroll
Quiz Modal	⚠ L01, L05, L06	⚠ L01, L05	✗ L01, L06	⚠ L05
LoadingSpinner	☑	☑	☑	☑

4. Recommended Fix Order (Layout-only)

Order	Issue ID	Effort	Files to touch (when approved)
1	SW-L01	Medium	SavedWordsScreen.tsx
2	SW-L02	Low	SavedWordsScreen.tsx
3	SW-L03	Low	SavedWordsScreen.tsx
4	SW-L04	Low	SavedWordsScreen.tsx
5	SW-L05, SW-L06	Low	SavedWordsScreen.tsx (same ScrollView change)
6	SW-L08	Low	SavedWordCard.tsx
7	SW-L09	Low	EmptyState.tsx or SavedWordsScreen.tsx (padding override)
8	SW-L11	Trivial	SavedWordCard.tsx
9	SW-L07, L10, L12	Optional	As needed

Estimated total: 1–2 hours for items 1–6; addresses all High and most Medium issues.

5. What Is NOT Broken (Verified OK)

Element	Why it passes
Main FlatList vertical scroll	flex: 1 container; bottom safe-area padding via insets.bottom
SearchBar	flex: 1 + minWidth: 0 on input; fixed 44px icon hits
SavedWordCard definition row	flex: 1, minWidth: 0 on definition Text ; wraps correctly
SavedWordCard example	numberOfLines={3} prevents unbounded height
SavedWordCard meta row	flexWrap: 'wrap' on metaRow
Quiz modal safe areas	paddingTop: insets.top, paddingBottom: insets.bottom

Element	Why it passes
<code>GlassCard</code> width	<code>width: '100%'</code> on saved cards; no explicit overflow hidden on content

6. Design vs Implementation — Layout Notes

Design region (HTML)	Implementation	Layout delta
Stats card (L197–231)	Side-by-side stats always	Design stacks on mobile via responsive classes; RN version never stacks → more pressure on SW-L02
Tab strip (L257–276)	Horizontal <code>FlatList</code>	Aligned — intentional horizontal scroll
Word grid (L278+)	Single-column <code>FlatList</code>	Design uses 2–3 columns on <code>md+</code> ; mobile single column matches <code>grid-cols-1</code>
Search (L234–244)	Full-width <code>SearchBar</code>	Aligned

7. Testing Checklist (Post-fix verification)

- ☐ iPhone SE (320×568) portrait — stats row, cards, tabs
- ☐ iPhone 14 Pro Max portrait — no regressions
- ☐ Landscape — quiz modal fully scrollable; all options reachable
- ☐ Settings → Font Scale → Large — subtitle, stats, card titles readable without clip
- ☐ Save word with 30+ character name — card header and quiz question OK
- ☐ Save words with long definitions — quiz options scrollable
- ☐ Empty state with 40+ character search query — description wraps, no horizontal scroll
- ☐ Confirm main screen does not scroll horizontally (tab strip may)

Audit complete. No code was modified. Awaiting approval before implementing fixes.
